

EG GREY

EG ORANGE

EG PURPLE

Switch Description

The EG MMS™ (modular-matrix-structure) Mechanical Switch allows for easy unplugging and plugging of individual switch via EG 2-in-1 puller. Thus provides the possibilities of mixing different switch types on one keyboard, as well as easy maintenance or replacement of switches when needed. EG MMS™ Switches are also made to provide better performance, reliability and durability. The actuation point has been shortened by 25% to 1.5mm to provide fast and precise response compare to conventional switches. The actuation force is tweaked at 50g for just the right clicking feel and feedback. And the high-strength contact plates made with bronze alloy ensures superior durability, together with the patented double-blade contacting points, forming a dual-cross contacting area with 30μ gold plating, achieving superior contact quality and life span.

Switch Types

-  EG GREY – Linear
-  EG ORANGE – Tactile
-  EG PURPLE – Tactile & Audible Click

Specifications

- > EG MMS™ - modular-matrix-structure mechanical switches
- > Actuation Force: 50g
- > Actuation Point: 1.5±0.2mm
- > Bottom Travel: 4mm
- > High-strength alloy contact plates
- > Double-blade contact points, patented
- > Dual-cross contacting area, patented
- > 30μ gold plated contacting area
- > Life Span: 70-million keystrokes

Country of Origin

Designed in Taiwan, made in China
